                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 10, Application US/09155076A
Patent No. US20020054870A1
Patent No. US20020054870A1
APPLICANT: Greenfield et al., Susan A.
TITLE OF INVENTION: PEPTIDE FROM SOLUBLE FORM OF ACETYLCHOLINESTERASE,
TITLE OF INVENTION: ACTIVE AS A CALCIUM CHANNEL MODULATOR
FILE REFERENCE: 98-9967*/WMC/00263
CURRENT APPLICATION NUMBER: US/09/155,076A
CURRENT PILING DATE: 1999-10-23
NUMBER OF SEQ ID NOS: 15
SOFTWARE: Patentin Ver. 2.0
Patent No. US20020054870A1
GENERAL INFORMATION:
APPLICANT GENERALIC al., Susan A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 50, Application US/10032233

Publication No. US20030153062A1

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Watkins, Jeffry D.
TITLE OF INVENTION: Butyrylcholinesterase Variants with
TITLE OF INVENTION: Increased Catalytic Efficiency and Methods of Use
FILE REFERENCE: P-IX 4642.
CURRENT APPLICATION NUMBER: US/10/032,233
CURRENT FILING DATE: 2001-12-20
NUMBER OF SEQ ID NOS: 50
SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 50
LEAST FARENCE: FASTS FAS APPLICANT: Greenfield et al., Susan A.

TITLE OF INVENTION: ACTIVE ROM SOLUBLE FORM OF ACETYLCHOLINESTERASE,

TITLE OF INVENTION: ACTIVE AS A CLICIUM CHANNEL MODULATOR

FILE REFERENCE: 98-0967*/FMC/00263

CURRENT APPLICATION UNMER: US/09/155,076A

CURRENT FILING DATE: 1998-10-23

NUMBER OF SEQ ID NOS: 15

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 15

LENGTH: 14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ; OTHER INFORMATION: Description of Artificial Sequence: POLYPEPTIDE US-09-155-076-15
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 52, Application US/10728723

Patent No. US20020119489A1

GENERAL INFORMATION:
APPLICANT: Lockridge, Okeana
APPLICANT: Matkins, Jeffry D.
TITLE OF INVENTION: Butyrylcholinesterase Variants and
TITLE OF INVENTION: Methods of Use
FILE REFERENCE: P-11X 4143

CURRENT APPLICATION NUMBER: US/09/748,739A

CURRENT FILING DATE: 2000-12-06

NUMBER OF SEQ ID NOS: 31

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 8

LENGTH: 574
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      2; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              APPLICANT: MacKridge, Okeana

Sequence 19, Application US/09748739A

Patent No. US20020119489A1

GENERAL INPORMATION:
APPLICANT: LOCATIGGE, Okeana

APPLICANT: Watkins, Jeffry D.
TITLE OF INVENTION: Butyrylcholinesterase Variants and
TITLE OF INVENTION: Methods of Use
FILE REFERENCE: P-IX 4143

CURRENT FILING DATE: 2000-12-06

NUMBER OF SEQ ID NOS: 31

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 19

LENGTH: 574

TYPE: PRT
                                                                               Sequence 18, Application US/09748739A

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
  Sequence 2, Application US/08814095;
Patent No. 6025183
GENERAL INFORMATION:
APPLICANT: Soreq, Hermona
APPLICANT: Sareq, Hermona
APPLICANT: Shani, Moshe
TITLE OF INVENTION: TRANSGENIC ANIMAL ASSAY SYSTEM FOR
TITLE OF INVENTION: TRANSGENIC ANIMAL ASSAY SYSTEM FOR
TITLE OF INVENTION: ANTI-CHOLINESTERASE SUBSTNACES
NUMBER OF SEQUENCES:
CORRESPONDENCE ADDRESS:
ADDRESSER: KOHN & ASSOCIATES
STREET: 30500 No. 6025183thwestern Highway, Suite 410
CITY: Farmington Hills

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: Patentin Release #1.0, Version #1.25

SOFTWARE: PAPLICATION DATA:

APPLICATION NUMBER: US/08/446,100

FILING DATE: 19-MAY-1995

CLASSIPICATION: 435

ATTORNEY/AGENT INFORMATION:

NAME: Hendricks, Glenna

REGISTRATION NUMBER: 32,535

REFERENCE/DOCKET NUMBER: 32,535

RELEPONE: (703) 425-4250

TELEFECHONE: (703) 425-4261

INFORMATION FOR SEQ ID NO: 2:

SEQUENCE CHARACTERISTICS:

LENGTH: 602 amino acids

TYPE: amino acid

TYPE: ACMINISHED NUMBER: ACMINISHED NO: 2:

SERANDEDNESS: single

Sequence 10. Application US/08446100

Patent No. 6001625

GENERAL INFORMATION:
APPLICANT: Broomfield, Clarence A APPLICANT: Milard, Charles B APPLICANT: Lockridge, Okeana
TITLE OP INVENTION: Site-Directed Mutagenesis of Esterases
NUMBER OF SEQUENCES: 31
CORRESPONDENCE ADDRESS:
ADDRESSEE: Hendricks and Assoc.
STREET: 9669 A Main Street, P.O. Box 2509
CITY: Fairfax
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 12, Application US/08446100

Sequence 12, Application US/08446100

Patent No. 6001625

GENERAL INFORMATION:
APPLICANT: Broomfield, Clarence A
APPLICANT: Miland, Charles B
APPLICANT: Lockridge, Oksana
TITLE OF INVENTION: Site-Directed Mutagenesis of Esterases
NUMBER OF SEQUENCES: 31
CORRESPONDENCE ADDRESS:
ADDRESSEE: Hendricks and A880C.
                                                                                                                                                     Sequence 11, Application US/08446100

Sequence 4, Application US/09334489
Patent No. 629175
GENEBAL INPORMATION:
APPLICANT: Pierre Sevigny
APPLICANT: Heako Webbusch
TITLE OF INVENTION: METHODS FOR TREATING A NEUROLOGICAL
TITLE OF INVENTION: DISEASE BY DETERMINING BCHE GENOTYPE
FILE REFREENCE: 08523/01300.
CURRENT APPLICATION NUMBER: US/09/334,489
CURRENT FILING DATE: 1999-06-16
PRIOR FILING DATE: 1998-06-18
NUMBER OF SEQ ID NOS: 8
NUMBER OF SEQ ID NOS: 8
LENGTH: 602
Sequence 3, Application US/09334489
Patent No. 629175
GENERAL INFORMATION:
APPLICANT: Pietre Sevigny
APPLICANT: Reith Schappert
APPLICANT: Keith Schappert
TITLE OF INVENTION: METHODS FOR TREATING A NEUROLOGICAL
TITLE OF INVENTION: DISEASE BY DETERMINING BCHE GENOTYPE
FILE REFREENT APLICATION NUMBER: US/09/334,489

Acetylcholinesterase.
Acyl-ester intermediate (By similarity).
Charge relay system (By similarity).
Charge relay system (By similarity).
By similarity.
By similarity.
Interchain (By similarity).
Interchain (By similarity).
Interchain (By similarity).
N-linked (GlCNAC. ...) (Potential).
N-linked (GlCNAC. ...) (Potential).
N-linked (GlCNAC. ...) (Potential).
-i- MISCELLANEOUS: This is the catalytic subunit of an asymmetric or soluble form of ACHE.
-i- SIMILARITY: Belongs to the type-B carboxylesterase/lipase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SEQUENCE FROM N.A., AND ALTERNATIVE SPLICING.

-!- FUNCTION: Rapidly hydrolyzes choline released into the synapse.
-!- CATALYTIC ACTIVITY: Acetylcholine + H(2)O = choline + acetate.
-!- SUBGUNIT: Interacts with PRIMA1. The interaction with PRIMA1 is required to anchor it to the basal lamina of cells and organize
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Felis silvestris catus (Cat).

MISCELLANEOUS: Synapses usually contain asymmetric molecules of cholinesterase, with a collagen-like part disulfide-bonded to the catalytic part. A different, globular type of cholinesterase occurs on the outer surfaces of cell membranes, including those of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Oryctolagus cuniculus (Rabbit).

into tetramers (By similarity). Isoform H generates GPI-anchored diamers; disulfide linked. Isoform T generates multiple structures, ranging from monomers and dimers to collagen-tailed and hydrophobic-tailed forms, in which catalytic tetramers are associated with anchoring proteins that attach them to the basal lamina or to cell membranes. In the collagen-tailed forms, isoform T subunits are associated with a specific collagen, COLO, which triggers the formation of isoform T tetramers, from monomers and

-I- FUNCTION: Rapidly hydrolyzes choline released into the synapse.
-I- CATALYTIC ACTIVITY: Acetylcholine + H(12)0 = choline + acetate.
-I- CATALYTIC ACTIVITY: Acetylcholine + H(12)0 = choline + acetate.
-I- SUBUNIT: Interacts with PRIMAL. The interaction with PRIMAL is required to anchor it to the basal lamina of cells and organize into tetramers (By similarity). Isoform H generates GPI-anchored dimers; (Bullide linked. Isoform T generates multiple structures, ranging from monomers and dimers to collagon-tailed and hydrophobic-tailed forms, in which catalytic tetramers are associated with anchoring proteins that attach them to the basal lamina or to cell membranes. In the collagon-tailed forms, isoform T subunits are associated with a specific collagen, COLQ, which triggers the formation of isoform T tetramers, from monomers and

Bartels C.F., Zelinski T., Lockridge O.;

"Mutation at codon 322 in the human acetylcholinesterase (ACHE) gene accounts for YT blood group polymorphism.";

Am. J. Hum. Genet. 52:928-936(1993).

-!- FUNCTION: Rapidly hydrolyzes choline released into the synapse.

-!- CATALYTIC ACTIVITY: Acetylcholine + H(2)O = choline + acetate.

-!- SUBUNIT: Homotetramer; composed of disulfide-linked homodimers.

Interacts with PRIMA1. The interaction with PRIMA1 is required to anchor it to the basal lamina of cells and organize into tetramers
                                                                                                                                                                                                                                                                                                                                                                                                                 MEDLINE=92388112; PubMed=1517212; Shafferman A., Kronman C., Flashner Y., Leitner M., Grosfeld H., Ordentlich A., Gozes Y., Cohen S., Ariel N., Barak D., M., Mutagenesis of human acctylcholinesterase. The molecular basis of the Yt(a) = Yt1/Yt(b) = Yt2 blood group antigens is a single variation in position 353; His-353 corresponds to Yt(a) and the rare variant with Asn-353 to Yt(b). SIMILARITY: Belongs to the type-B carboxylesterase/lipase family. DATABASE: NAME-Blood group system;

-!- FUNCTION: Rapidly hydrolyzes choline + H(2)0 = choline + acetate.
-!- CATALYTIC ACTIVITY: Acetylcholine + H(2)0 = choline + acetate.
-!- SUBUNIT: Hometeramer; composed of disulfide-linked homodimers.
Catalytic forms H (GPI-anchor dimer) and T (asymmetric collagentailed), which differ in their C-cerminus, account for all types of known ACHE forms. Interacts with PRIWA1. The interaction with PRIWA1 is required to anchor it to the basal lamina of cells and

Biol. Chem. 272:33045-33055(1997).
-i- FUNCTION: Rapidly hydrolyzes choline released into the synapse.
-i- CATALYTIC ACTIVITY: Acetylcholine + H(2)O = choline + acetate.
-i- SIMILARITY: Belongs to the type-B carboxylesterase/lipase family.
                                                                                                            Gaps

CATALYTIC ACTIVITY: Acetylcholine + H(2)O = choline + acetate.
SUBUNIT: Dimers and collagen-tailed forms, in which catalytic
tetramers are associated with anchoring proteins that attach them
to the basal lamina or to cell membranes. In the collagen-tailed
forms, subunits are associated with a specific collagen, COLO,
which triggers the formation of isoform T tetramers from dimers.
MISCELLANBOUS: No other isoforms exist. This protein corresponds
to the T isoform in other species.
SIMILARITY: Belongs to the type-B carboxylesterase/lipase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Acetylcholinesterase.

--- TISSUE SPECIFICITY: Liver and muscle contain both isoform T and isoform S. Venom gland predominantly contains isoform S.
--- PTM: The N-terminus is bloom to the type-B carboxylesterase/lipase family.
--- SIMILARITY: Belongs to the type-B carboxylesterase/lipase family.
--- CAUTION: It is uncertain whether Met-1 or Met-9 is the initiator.

                                                                                                      two subunits in a dimer are linked by a disulfide bond.
--- TISSUE SPECIFICITY: Present in most cells except erythrocytes.
--- MISCELLAMBOUS: Cholinesterase is highly reactive with organophosphate esters.
---- SIMILARITY: Belongs to the type-B carboxylesterase/lipase family.

carboxylic acid anion.
SUBUNIT: Homotetramer. The tetramer is composed of two dimers. The two subunits in a dimer are linked by a disulfide bond.
TISSUB SPECIFICITY: Present in most cells except erythrocytes.
DISBASE: Mutant alleles of CHEI are responsible for hypocholinesterasemia resulting in suxamethonium sensitivity.
Hypocholinessessemia resulting in suxamethonium sensitivity. the muscle relaxant suxamethonium after administration of the muscle relaxant suxamethonium in connection with surgical
                                                                                                                                           organophosphate esters. SIMILARITY: Belongs to the type-B carboxylesterase/lipase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Cholinesterase.
